Dengue Awareness

Dengue fever is a mosquito borne disease that may cause a person to get a fever, headache, joint, and muscle pains.

Here is what to do if you get Dengue. Get plenty rest and drink lots of water or juice. If you develop a fever take Panadol, Cetamol or other similar medication. The Ministry of Health and Wellness says that aspirin should not be taken as this will make it worse.

At present, the only way to prevent and control the spread of Dengue is to destroy the mosquitoes that pass on the disease.

The following are some tips on how you can do that:

1. Do not keep old drums, used tyres, plastic containers in your surroundings.
2. Cover sleeping area with mosquito netting.
3. Avoid mosquito bites even during the day.
4. Wear long sleeve shirts and long pants outdoor.
5. Use mosquito repellent on skin and clothing.
6. Change water in animal and pet containers regularly.
